## 30

### Innovative new products showcased at the 27th Annual EMS Today Conference & Exposition

>> BY FRAN HILDWINE, BS, NREMT-P, CCEMT-P

The JEMS product review team, a group of seasoned EMS providers, scoured the exhibit hall at the EMS Today Conference & Exposition in March looking for the most innovative, functional and potentially life-saving products to come onto the market in the past 36 months. This year, the team evaluated more than 70 new products, but they selected the following top 30 (presented in random order), because they felt they offered remarkable improvements to patient care and provider performance. Look for many of the other products released at EMS Today in future JEMS Hands On columns.

## 22 CELOX-D

This addition to the CELOX line of hemostatic granule agents is designed to effectively stop moderate to severe bleeding. CELOX-D uses the same chitosan-based agent as traditional CELOX, but with a new, unique and highly effective delivery system. The agent is contained in three dissolvable bags that allow precise and easy placement. Each bag breaks down upon contact with blood, releasing the agent right where it's needed in the wound.
