TWIST.  
SECURE.

PROVEN TO SURVIVE
Engineered for rapid application, SAM XT’s innovative design requires fewer windlass turns, and enables easier, faster training and intuitive use. Meets MIL-STD 810G for durability.

FEATURED TECHNOLOGY

TRUFORCE™ BUCKLE
Slack is the main cause of failed tourniquet application. The TRUFORCE™ Buckle technology auto-locks to eliminate nearly all tourniquet slack by incorporating innovative baseline force control, activating the locking prongs.
**TIME BAND**
Weather-resistant hook and loop system functions when fully submerged, providing maximum security in the harshest weather. Outer material is optimized for night vision.

**WINDLASS C-HOOKS**
Secures the Metal Windlass Rod using an intuitive angular design, making windlass locking easier and more efficient.

**TRUFLEX™ PLATE**
Durable nylon construction distributes force as targeted pressure for maximum strength and flexibility, able to bend on smaller extremities without breaking.

**TRUFORCE™ BUCKLE**
Innovative auto-lock technology activates locking prongs, eliminating slack typically found in all other tourniquet applications.

**METAL WINDLASS ROD**
Machined from extruded bars of strong, lightweight 6061-T6 true billet aluminum for consistent reliability when compared to plastic composites.

**PRECISION STRAP**
Velcro-dependent tourniquets can fail when wet or dirty. The all-weather Precision Strap is made of single-layer nylon webbing. It features interveled holes that lock with the TRUFORCE™ Buckle to create a consistent, efficient primary security system. The secondary hook and loop system secures the remaining strap, adding stability and safety.

**PRECISION TAB**
Intuitive design allows for quicker, easier tourniquet application. Material is optimized for night vision.
